VIABLE AIR MONITORING SOFTWARE

Microbial Air Sampling System (MAS)

Viable air monitoring from online and portable microbial air samplers in one system — every sample tied to its location, plate and colony count, and checked against its limits.

OVERVIEW

MAS keeps both kinds of sampler in one record. Each sample is known by where it was taken and on which plate, and its count is checked against the limits as it is entered.

WHY TEAMS CHOOSE GAMP MAS

Online and portable, one record

Continuous sampling from online samplers in the critical zone and scheduled rounds with portable ones, recorded the same way against the same locations.

Every plate accounted for

The sampling plan decides what is sampled where, by room and grade, and each plate is tracked from its media lot through incubation to its count.

Limits and trends, not just counts

Colony counts are checked against alert and action limits as they are entered, and trended by location, room and grade.

CAPABILITIES

- ✓ Online samplers for continuous viable monitoring in critical zones
- ✓ Portable samplers for scheduled sampling rounds
- ✓ Sampling plans by room, grade and location
- ✓ Plate tracking from media lot through incubation
- ✓ Colony counts checked against alert and action limits
- ✓ Trend reports by location, room and grade

ON THE FACILITYONE PLATFORM

- Single sign-on across modules, managed through one administration layer
- Active Directory integration
- Audit trail, electronic signatures and role-based access
- Cloud, on-premises or hybrid deployment
- Built for 21 CFR Part 11 and EU Annex 11

THE COMPLETE SYSTEM

Active air samplers **Passive samplers** **Online samplers**

MAS also works with air samplers from other makers. Connecting another maker's hardware is an integration project, carried out with that manufacturer and your team. Hardware is supplied by GAMP Services Limited, our parent company.
